Steve:

I left you a message yesterday. If you need to get hold of me you need to call me on my cell at 214.789.1627. It appears from the communication that you have already received CERCLA Offsite Approval from Ron Shannon concerning Texas Molecular.

Also, as I mentioned in my message, I would like to get you plan for the cell that you propose. I will need to check with TCEQ to see if they are ok with the construction of a bioremediation cell for grossly contaminated soils. Do you have any analytical for the soils that you propose to apply to this cell if it is approved? Please get back to me on my cell. Thanks

I've left a couple messages and haven't heard from you so I'll try email. At the Falcon Refinery we're likely going to start hauling away the contents of the tanks in the next three weeks. We gauged just under 7 million gallons of waste and plan to have the waste deep well injected at the Texas Molecular injection well in Corpus.

Also, I've mentioned that we would like to landfarm grossly contaminated soil in a cell that we construct. The cell would be one acre in size with a clay base and then a synthetic liner and two feet of clean fill. I can send you plans for the cell and the location.
